## SUMMARY

---

I am a self-taught full-stack engineer with 3 years of experience delivering production-ready apps. I quickly turn ideas into working products with attention to design, performance, and user experience.

## WORK EXPERIENCE

---

### Sparta Grounds

2023 - present

- Migrated main site from WordPress to Astro for better performance and developer experience
- Built complete client portal from zero, now core to business operations
- Integrated payment systems with PayPal/Interac
- Own architecture decisions and lead implementation of new features

### Upwork freelance

2022 - present

- Maintained 100% Job success score across 40+ projects
- Delivered production websites and applications for US/international clients
- Specialized in rapid prototyping and full-stack development

## PROJECTS

---

### Unfiddle — Operations platform for procurement teams

[View live](#)

Fixed spreadsheet mess for a small team with a real-time collaborative platform. Features order and procurement management with extensive analytics, zero infrastructure costs using Cloudflare edge computing, real-time collaboration and integrated whiteboarding. The project is open sourced and pinned on my github.

### Sanao — Natural remedies search for any health concern

[View live](#)

Architected the entire technical stack for a consumer health product. Features nice streaming of LLM responses powered by a web scraping & Gemini, integrated subscription payments, and internationalization. I designed the complete UI/UX and branding from scratch too.

### Client work

[View more](#)

Shipped several production marketing sites mainly using Astro and TailwindCSS for US and international clients. This includes a healthcare provider site ([417 Recovery](#)), front-end work for the massive education platform ([Tutorials Point](#)), and the site for a non-profit organization ([Volunteers for Ukraine](#)).

### Tracker — personal app

[View live](#)

The app I created for myself to track my work hours and earnings.

## SKILLS

---

Languages	TypeScript, JavaScript
Frameworks/Libraries	React, Solid, Astro, NextJS, TailwindCSS, Hono, Express, TRPC, TanStack
Databases	PostgreSQL, MySQL, SQLite along with ORMs like Prisma & Drizzle; Supabase, Convex, Redis
